WE CREATE THE STORY OF
FRUITS AND HERBS...

DO YOU KNOW THE DIFFERENCE BETWEEN NFC JUICE 100% AND 100% CONCENTRATED JUICE?

What does NFC mean?

NFC juices are directly pressed from fruit rather than made from concentrate. The abbreviation itself, NFC, stands for "not from concentrate." The processed ingredients are sorted, washed, squeezed and poured into a vessel. This process resembles traditional homemade juice preparation. This simple method makes juices retain nourishing and health-enhancing properties.

Concentrated juice

Concentrated juices are formed by means of many hours long water evaporation at a high temperature, resulting in the loss of most vitamins, antioxidants and polyphenols contained in fruit. It is not uncommon that fruit of inferior quality are used for production or finished juice is thinned with water. All this directly reduces the price of the product.

More than juice

NFC Premium Rosa juices are developed for a specific, health-enhancing action. In Premium Rosa product recipes, the customer will not find concentrated juices, concentrates, glucose-fructose syrup, colouring agents, flavours or any preservatives. It is estimated that, in juices reconstituted from concentrated juices, the amount of fruit is more than three times smaller than in NFC juices.

PREMIUM ROSA

WE CREATE THE STORY OF FRUITS AND HERBS...

Premium Rosa has been in the Polish market for many years. We are a certified producer of NFC juices, syrups, dietary supplements, functional beverages, conserves as well as fruit and herbal teas for children and women. All of our products are made using well-tried methods — ones that fall far short of the modern understanding of industrial food production.

As a producer of premium products, we choose reliable solutions: from high-quality raw materials to recipes and traditional manufacturing processes. Our primary mission is to keep the quality of our products at the highest possible level and maintain the health-enhancing and nourishing properties of the plants that we process. Our products are made from fresh fruit, flowers and herbs, the origin of which we know from A to Z. The professional and honest approach to suppliers and customers pays off with their long-term loyalty.

At first, all of our products were branded Premium Rosa. As we developed our offer and had to maintain its coherence, we felt the need to create the Nasze Domowe brand in the second half of 2013.

NFC JUICES

NFC juices are types of juices that are pressed directly from fruit and not reconstituted from concentrate (NFC – Not From Concentrate / Never From Concentrate). Thanks to such a manufacturing process, our juices keep all of their nutritional values and constitute a natural supplement to an everyday diet. These are naturally unclarified and preserved by pasteurisation.

ORGANIC NFC JUICES

We produce organic NFC juices from organic fruits. The ingredients that we use for production come from certified organic farms where no synthetic plant protection agents or large-scale monocultures are used. Natural watercourses are maintained within the cultivated areas. Only green fertilisers are used, which – in conjunction with compost and soil liming – makes it possible to maintain soil fertility at appropriate levels. Organic farming uses machines and tools that protect the soil, and what is most important – crops are grown away from roads and industrial facilities.
